## If you only need the buying answer

If you only need access for a limited review window, the short digital route starting at **\$44.70** is the cheapest option, and the sampled 120-day rental at **\$87.99** is also below print. If you want a keepable copy for repeated case-based study, the current print listing at **\$127.87** is still far below the sampled buy and marketplace comparators and can make sense for longer-term clinical use.

Case-based psychiatry books are rarely read once and abandoned. Their value often grows as readers begin comparing presentations, differential paths, and management decisions across multiple cases. In geriatric psychiatry, that comparative structure matters even more because cognition, medical comorbidity, ethics, and systems of care are tightly linked.

## What this book actually teaches

*Geriatric Psychiatry: A Case-Based Textbook* teaches through clinical scenarios rather than through detached summary alone. Its value lies in helping readers think through assessment, differential diagnosis, management, and care complexity in older adults. That makes it useful not just for reading, but for return visits when similar cases arise later.

Because the book works through cases, it behaves more like a clinical-study companion than like a one-pass survey text. That is why ownership still has a real case even when short-term access is cheaper.

## When print is worth keeping

If you only need the book for a short exam or course window, digital or rental is the cheaper route. If you expect to revisit geriatric psychiatry cases later in training or practice, the current print listing is easier to justify because it is still much lower than the sampled buy alternatives.
